

Dear Examiner ALLEN —

Below are results from the search you requested on **Application 10/696274**, from the Dialog databases, unless otherwise noted.

The results are in our regular format, which begins first with a search for the inventors' own works in both patent literature (mostly foreign) and in general non-patent literature, without date-limitation, and the results then proceed to searches and results which are directed at, and comprised of, the prior art and related subject-matter which were found in those same sets of mostly foreign patent literature and non-patent literature.

For ease of use, results that appear of perhaps most direct relevance are highlighted in yellow and red. Further, those highlighted results are also marked with a double tilde (~~) so that if you use the "Find" function under the Edit menu of Word, you can search for ~~ and you will be taken right to those selected results.

But please note, it is essential to examine all results here, and any others that may also accompany this set, since the highlighting is merely a set of suggestions designed simply to aid, and not substitute for, the necessary full review of all results.

Title: Utah Digital Signature Act

Journal: EDI Law Review vol.2, no.3 p. 157-96

Publication Date: 1995 **Country of Publication:** Netherlands

CODEN: EDLRE7 **ISSN:** 0929-2233

U.S. Copyright Clearance Center Code: 0929-2233/95/\$8.00

Language: English **Document Type:** Journal Paper (JP)

Treatment: General, Review (G)

Abstract: The two-fold purpose of this Utah **Digital Signature** Act is to provide a reliable means of signing computer-based documents, and to provide legal recognition of **digital signatures** using what CCITT/ITU standard X.509 terms strong authentication techniques, techniques relying on asymmetric cryptography. The signature reliability thus provided approximates the level of assurance given by a conscientious notary's acknowledgment; higher levels of assurance can be provided by supplementary contractual arrangements. The resulting effect of a reliable means of signing using strong authentication techniques will be to reduce the risk of an invalid **digital signature** well below the comparable risk for paper **signatures**. Consequently, **digital signatures** increase the assurance of authentication for transactions such as commercial paper (sales contracts, drafts, notes, checks, and security agreements), other contracts, real property transfers,~~ governmental filings (electronic filings in litigation, criminal justice record-keeping, tax returns, financing statements and corporate filings, etc.), factual representations, electronic correspondence, and other legally significant documents. (0 Refs)

Subfile: C

Descriptors: authorisation; cryptography; legislation; message authentication; standards

Identifiers: Utah **Digital Signature** Act; computer-based documents; **digital signatures**; CCITT/ITU standard; X.509; strong authentication techniques; asymmetric cryptography; signature reliability; contract; governmental filing; legal documents

Class Codes: C6130S (Data security); C0230B (Legal aspects of computing)
